(54) NEW COMPOUND AND LIGHT-EMITTING DEVICE USING THE SAME

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a compound having good hole transportability and, simultaneously, excellent durability, and a light-emitting device having high luminance and excellent durability containing the same by using the light-emitting device into which the compound is incorporated.

SOLUTION: The compound is represented by formula (1) (wherein X is a hole transporting group; Y is a divalent connecting group or a mere bond; Z is a group of ≥ 3 atoms capable of forming a ring structure; R is a hydrogen atom or a substituent; at least one of the group having substituted the site contiguous to the site at which X is connected to Y and R is a group other than a hydrogen atom; and R may be connected to Z to form a ring structure), and the light-emitting device comprises the compound.
